

Aesthetic Genital Procedures: An All-Enhancement From Function To Appearance (The Potential Application Of Exosome, PRP And Fat Graft In Genital Area)

Dr. Ya-Wei Lai 賴雅薇

Female genital rejuvenation procedure and functional improvement are increasing popular issues. Female patients care about not only functional problems but also aesthetic appearance. In previous academic papers, we proved that micro-autologous fat injection is not only a treatment for vulvovaginal rejuvenation but also sexual function improvement without adverse events. Especially in the postpartum patients via vaginal delivery, the lubrication, dyspareunia and sexual function impairment can improve with statistical significance.

The application of exosome might increase elasticity, improve itching and dryness in vagina. We will show our preliminary data with exosome local injection and topical application in vagina of rats .
