

# Using Combined Technologies For Liposculpture: A Safe And Effective Approach

## Dr. Chia-Lin Lee 李兆翔

Liposuction is one of the most common surgically performed procedures in plastic surgery. Liposculpture (High Definition Liposuction) is an advanced liposuction, not only deep layer but also superficial layer and fat graft.

There are many new technologic medical devices are invented in recent years, such as VASER, Renuvion, fat auto injector, wireless ultrasound, LPG. It is a safe, precise and effective approach to liposculpture by combined using these technologic devices. Liposculpture has become a reliable procedure providing a more athletic outcome, being a major trend.
